Smarter Video Solutions

Electric Box Cameras

...

Smarter Security's SmarterCam Covert series represents state-of-the-art outdoor or indoor electric box pinhole cameras. The unit looks just like an electrical junction box, but a high quality day/night color camera is hidden inside the unit and sees out of a tiny hole in the yellow warning sticker on the front of the box.

FUNCTION

SmarterCam Covert Electric Box Cameras come with optional self-contained battery power for hours of unattended run time. The electric box can be quickly attached and removed, indoors and out, for observation anywhere day or night and in low light conditions. By using a common electric box to enclose the camera, surveillance is not suspected. The yellow warning sticker acts as both a deterrent for tampering, and highly discreet, not drawing attention to its presence. The pinhole is virtually invisible.

DVR INTEGRATION

SmarterCam Covert Electric Box Camera integrates perfectly with the SmarterDVR digital video recording surveillance system. Once integrated with the DVR, these electric box pinhole cameras are ideal for covertly recording vandalism or suspicious activity.

SmarterDVR supports scheduled, event-based, continuous, and motion-based recording with adjustable frame rates per camera. With internet connectivity, the DVR can send an email notification with a JPEG snapshot when motion by an intruder is detected by the camera. Remote viewing and video playback over a cellular data network is also available.

APPLICATIONS

Oil and Gas
Government Sites
Municipalities
Law Enforcement
Construction

SAMPLE APPLICATION

A gas well site is having problems with vandalism and theft and wants to covertly record the criminal activity. They install a SmarterCam Covert Electric Box Camera on a pole which looks just like an electrical box. The camera integrates with a SmarterDVR which is set to record upon motion. When the suspect steps into the area, the camera films him and the DVR sends a JPEG snapshot of the perpetrator to authorities real-time via a cellular network. The authorities and security can take appropriate action. The perpetrator is then identified.

SPECIFICATIONS

Day/Night Color Camera
0.5 Lux
520 lines of resolution
Compact 1.25 X 1.25 Square
DIP switches for backlight compensation
3.6MM 92 degrees FOV microlens
3.7MM 90 degrees FOV pinhole lens
4.3MM 78 degrees FOV ultra pinhole lens

(Due to continual improvements, specifications are subject to change without notice)
